AREAS OF EXPERTISE

- HTML
- CSS
- JavaScript
- React & React-Native
- Git & Github
- MongoDB
- Express
- Node Js
- APIs
- Bootstrap / Reactstrap

PROJECTS

Simply Fit - Fitness for Anyone

<https://github.com/JacobMooney/SimplyFit-React>

HTML, CSS, JavaScript, BootStrap, React, React Router

- The primary goal of the website is to demystify the concepts and techniques used most commonly for training and nutrition.
- The website also includes a web app where users can select from various options, in order to generate an example workout to follow for the week.

Can We Listen? - Auditory Accessibility App

<https://github.com/MichaelWhitt/CanWeListen2.0>

HTML, CSS, JavaScript, BootStrap, React, TomTom Maps API, React Router

- Can we Listen is a website/app working to provide accessibility information for movie goers with auditory and visual impairments.
- The objective is to provide a service to people whose specific needs are often overlooked, and options at those facilities, are often under cared for.

Mini Message Board - Small Messages App

<https://github.com/JacobMooney/mini-message-board-client>

HTML, CSS, JavaScript, React, Express, MongoDB Atlas, Monk, Joi, Bootstrap

- A tiny message board app where visitors can leave short message, with their name, a subject, message, with a gif or image.
- The submissions from the site are sent to an Express server hosted on Heroku, which communicates with a MongoDB Atlas database to save and store the messages.
